Cytotoxic Drug Reconstitution (CDR) Facility

The CDR Facility within our Cancer Care Services provides a specialised, controlled environment for the safe preparation of chemotherapy drugs.

Adhering strictly to aseptic techniques and regulatory standards, it protects both patients and healthcare staff from exposure to hazardous substances.

Every treatment is prepared with precision to maintain the highest quality and safety standards, supporting optimal therapeutic outcomes.

Patient Support Group

Our Cancer Patient Support Group provides a compassionate space for emotional support and shared experiences.

Patients and their families are welcome to join this network of encouragement, learning, and understanding, helping them cope better with treatment, reduce anxiety, and stay positive throughout their journey.

At Tung Shin Hospital, we believe no one fights alone. We are with you.

SERVICE GUIDE

A One Stop Centre for Cancer Patients

A cancer diagnosis can bring uncertainty — but with the right care and support, there is always hope.

Tung Shin Hospital Cancer Care Services provides a full range of cancer treatments under one roof, including **chemotherapy, hormonal therapy, targeted therapy, immunotherapy, radiotherapy, and brachytherapy.**

Recognising the increasing number of patients facing cancer, we are committed to continuously enhancing our facilities and services to better meet patients' needs.

Each patient is supported by a compassionate, multidisciplinary team dedicated to providing personalised, safe, and effective care at every stage of their journey.

Multidisciplinary Approach

Being diagnosed with cancer can feel overwhelming. The first step is to speak with a cancer specialist and care team who can guide you forward.

At Tung Shin Hospital, our multidisciplinary cancer care team brings together consultant oncologists, radiologists, surgeons, and oncology nurses — supported by radiation therapists, medical physicists, pharmacists, physiotherapists, dietitians, and medical laboratory technologists.

Cancer care often involves different forms of treatment and medical expertise. Together, this team ensures that every patient receives comprehensive care that focuses not only on treatment, but also on comfort, recovery, and overall well-being.

Complementary Traditional Chinese Medicine (TCM)

At Tung Shin Hospital, we have a long-standing reputation in TCM.

Patients may choose to complement their cancer treatment with herbal medicine, acupuncture, or tuina massage to help ease side effects and support recovery. They are encouraged to discuss these options with their doctors to ensure safe and well-coordinated care.

1. Radiotherapy

The Radiotherapy Unit is equipped with a newly installed Varian TrueBeam™ Linear Accelerator, a state-of-the-art technology that delivers highly precise and effective treatment.

This advanced system enables faster and more accurate targeting of tumours while minimising damage to surrounding healthy tissue — resulting in improved outcomes and fewer side effects.

With this technology, we can perform sophisticated treatment techniques such as IMRT, VMAT, IGRT, and SBRT, providing patients with shorter treatment times and greater comfort throughout their therapy.

2. CT Simulator

A dedicated CT Simulator and advanced Planning System are located within the Radiotherapy Unit. These technologies allow precise imaging and accurate dose planning, ensuring optimal results and improving the effectiveness of treatment.

3. Brachytherapy System

For certain cancers, such as gynaecological cancers, High Dose Rate Brachytherapy offers a targeted way to deliver radiation from inside the body.

This precise, localised treatment can often be performed on an outpatient basis, making it more convenient and comfortable for patients.

4. Chemotherapy

Chemotherapy remains an important part of cancer treatment. The Oncologists will discuss, plan, and prescribe a treatment regime tailored to each patient's condition.

Our Day Care Unit is managed by a team of qualified and experienced oncology nurses, supported by the Onco-Pharmaceutical team, who ensure safe and attentive care during treatment.

We also provide minor procedures such as wound care and blood transfusion within the same unit for patients' convenience.
